

COMP-584 Project 1 — Email Campaign Testing Report

This report documents the Project 1 features added to the supplied HW3 campaign and the browser/mobile preview performed during development. The implementation keeps the HW3 table-based email foundation and adds the Project 1 multi-column, animation, and checked-radio requirements.

Project 1 feature checklist

Requirement	Implementation
Two-column component	Two equal-width table cells with new Morning Briefing and Afternoon Follow-up content.
Three-column component	Three table cells with new Be Bold, Be Memorable, and Be Prepared content.
Responsive stacking	The multi-column cells become full-width blocks at 600px and below.
Mobile text size	Mobile rules reduce headings/body text in the multi-column sections.
Button/link interaction	The campaign button and text links use real internal anchor destinations and hover styling.
Keyframe animation	Uses <code>translateY()</code> and <code>rotate()</code> ; the animation does not use opacity or scale.
Checked-box technique	Uses radio buttons, labels, and div panels with <code>:checked</code> selectors.

Desktop preview

A browser-style desktop rendering was generated from the Project 1 HTML. It is a development preview, not a claim that a particular email client rendered it identically.

Michael Scott Presents!!

Jan made me breakfast this morning. Well, she bought the milk... It's soy! Get in there right now or I am going to lose it! I would not miss it for the world, but if something else came up, I would definitely not go, ah, that baby is just discovering the whole wide world right now.

To keep secrets from my computer, took me all night, that is a very, very funny story, why is my office black? That's crazy, mmmm... THAT'S WHAT SHE SAID! I am aware of the effect I have on women.

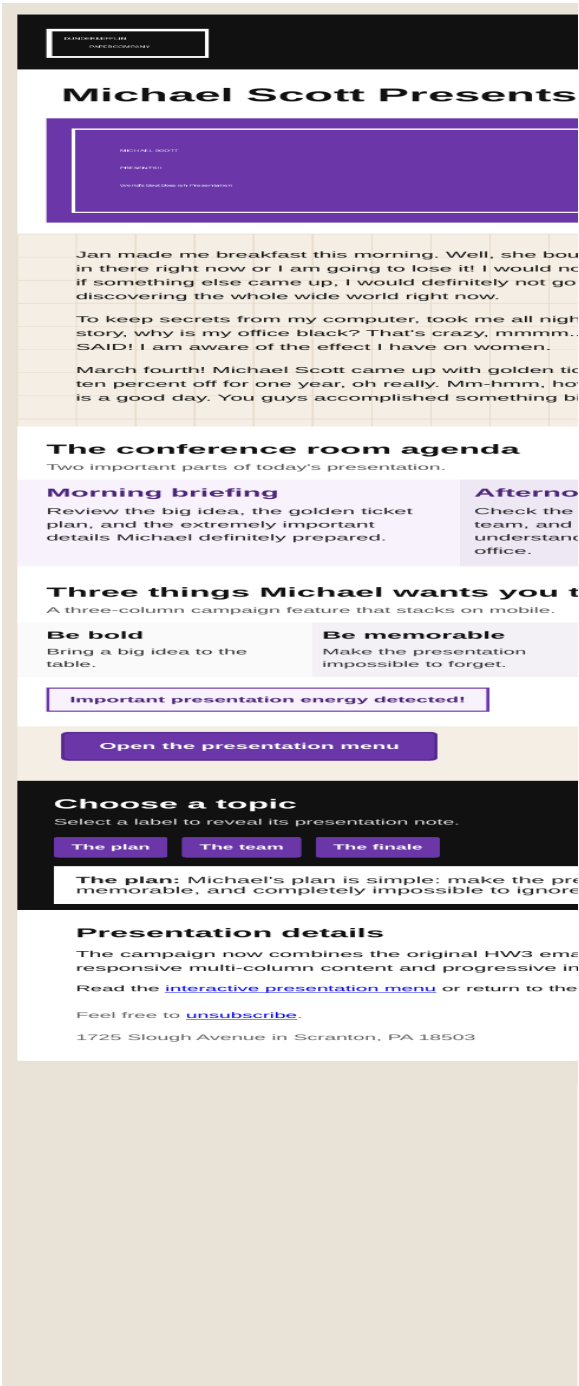

March fourth! Michael Scott came up with golden ticket idea to give customers ten percent off for one year, oh really. Mm-hmm, how would you do that? This is a good day. You guys accomplished something big.

The conference room agenda

Two important parts of today's presentation.

Mobile preview

A narrow 390px rendering was generated to inspect the responsive layout and intended stacked multi-column behavior.

Email-client testing notes

Preview testing performed: Desktop and 390px mobile renderings were generated from the campaign. The campaign uses ordinary HTML anchors for button/link destinations, table-based layout for the email foundation, and a CSS media query for the multi-column mobile stack.

Live-client limitation: Gmail, Outlook, and Apple Mail accounts were not available in this environment. Therefore this report does not invent results for those clients. The assignment's final live-client interaction test still needs to be performed with actual accounts.

Expected compatibility considerations: The supplied COMP-584 Week 3 material explains that email clients can differ in CSS support. The keyframe animation, hover state, media-query stacking, and radio/label interaction are progressive features that should be checked in each target client. The underlying campaign content remains ordinary HTML inside the table-based structure.

HW3 continuity: The supplied HW3 project was used as the starting point. Its 100%-wide outer table, fixed 600px inner table, presentation roles, responsive hero image technique, background-image text area, logo/hero/background assets, and accessibility report were retained.
